

ABSTRACT

A tether substantially prevented from snugly encircling an appendage or neck of a child aged five or under, thereby substantially preventing a danger of choking and/or loss of circulation while maintaining an accessory near the child, comprising at least one elongate
5 relatively stiffer section and at least one relatively flexible accessory section extending from the at least one relatively stiffer section, the relatively flexible accessory section being adapted to connect to a child accessory and incapable of snugly encircling the neck or appendage in conjunction with the at least one relatively stiffer section.
